EXPLANATORY NOTES

This bulletin contains particulars of the principal series of estimates of wage and salary earners in employment for which current figures are published in the monthly bulletin Employment and Unemployment. It incorporates all the revisions made to the estimates earlier this year, including those which, for reasons of space, could not be published in the April, 1965 issue of the monthly bulletin. Figures are given for each month from June, 1961 to June, 1965. The bulletin supersedes the previous issue in the series - Wage and Salary Earners in Employment, July, 1962 to June, 1964 (S.B. 101) - and includes a more detailed dissection of industry sub-groups for Australia (Section I), as well as new tables showing industry series for males and females in each State (Section II). The figures for the period June, 1961 to June, 1962 were shown in less detail in S.B. 79 - Wage and Salary Earners in Employment, June, 1954 to June, 1962.

2. The series contained in this bulletin, except those relating to government employees and defence forces, are based on comprehensive data (referred to as "benchmarks") derived for the purpose from the population census of June, 1961. The figures shown are estimates obtained from three main sources, namely, (a) Payroll Tax returns; (b) returns from Government bodies; and (c) some other direct records of employment (e.g. for hospitals). Data from these sources have been supplemented by estimates of changes in the number of wage and salary earners not covered by the foregoing collections.
3. Particulars of employment obtained from other collections, such as the annual factory census and the censuses and sample surveys of retail establishments, have been used to check, and, where desirable, to revise estimates in relevant sections. Some of the figures in this bulletin are subject to further revision as the results of later censuses and surveys become available.
4. The benchmark figures were derived from particulars recorded for individuals on population census schedules. The estimated monthly figures were derived mainly from reports supplied by employers, relating to enterprises or establishments. These two sources differ in some cases in scope and in reporting of industry; however, the industry dissection of the benchmark totals was adjusted, as nearly as may be, to an enterprise/establishment reporting basis. The industry classification used throughout the series is that of the population census of June, 1961.
5. Payroll Tax returns are lodged at present by all employers paying more than £200 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals and other similar organizations specifically exempted under the Payroll Tax Assessment Act 1941-1963). The exemption limit was raised to the present level as from 1st September, 1957.
6. Employees in rural industry and in private domestic service are not included in the estimates, because of the inadequacy of data.
7. The figures herein relate to "wage and salary earners" on payrolls or "in employment" in the latter part of each month as distinct from the numbers of employees actually working on a specific date. They include some persons working part-time.
8. The prime purpose of this series is to measure, as nearly as may be with available data, monthly trends in employment in the defined field. The estimates are less reliable for longer term measurement.

NOTE. - All figures in the tables are shown in thousands with one decimal place. Any discrepancies between totals and sums of components are due to rounding.
